Employment Law Center of Maryland puts AI to work—for Maryland workers

Frederick, Maryland. The Employment Law Center of Maryland – Maryland's only nonprofit employment law firm – is among the first law firm in the country to deploy [Casetext's CoCounsel](), an AI legal assistant that performs the legal tasks.

Legal AI company Casetext developed CoCounsel as the world's first reliable AI legal assistant, powered by the most advanced large language model OpenAI ever created. CoCounsel is able to respond in seconds to natural language instructions and read, comprehend, and write at a postgraduate level. CoCounsel automates critical, time-intensive legal tasks and produces top-quality work more quickly, accurately, and precisely than humanly possible. Casetext announced recently that CoCounsel is powered by GPT-4, the latest, most advanced large language model from OpenAI. GPT-4 recently passed a simulated version of the bar exam, ranking among the 10% of human test takers.

Attorneys at the Employment Law Center of Maryland assisted Casetext in developing CoCounsel during its beta phase by rigorously testing the tool, and providing feedback to Casetext. Now, the Employment Law Center of Maryland will use AI to perform a variety of tasks, from legal research to drafting communications and documents.

Per the Employment Law Center of Maryland's Managing Attorney Joseph W. Gibson, "We represent Maryland workers with claims against some of the largest corporations on the planet. Those corporations are backed by armies of lawyers and seemingly endless resources. **AI tools like CoCounsel are going to help level the playing field for Maryland workers**."
